

Dot-free COB strip light is our latest addition to the LED strip light range which provides continuous light without the issue of seeing the LED dots. They are dynamic and versatile linear light sources, with 12W/M and in power and different whites.

We also provide solutions for various high quality aluminium extrusions to accommodate linear strip lighting. They are ideal if strip light will be openly visible once fitted, as they can create a more 'finished product'.

Hermetically sealed, the IP68 version is suitable for continuous immersion in water.

## Features

- Easy to cut to size or extend as needed
- Super flexible form that'll stick to just about anything\*
- Over 100 type of aluminium extrusions including flush and surface mounted as well as suspension options for housing the strips

\*Wipe dry the extrusion using a lint-free cloth before installation, peel back the tape backing and stuck in place using a static glove. Correct installation of this product requires a few dabs of silicon along the length to hold it in place. The glue is normally enough, but sometimes it doesn't stick so well to the paint and so we recommend a little dab of silicon every 20cm or so on each side of strip in a zig-zag pattern.
